Exam.9 Change Set

2018年7月12日   10:39

Use change sets to send customizations from one Salesforce org to another. For example, you can create and test a new object in a sandbox org, then send it to your production org using a change set. <mark>Change sets can only contain modifications you can make through the Setup menu</mark>. For example, you can't use a change set to upload a list of contact records. Change sets contain information about the org. They don't contain data, such as records.

Sending a change set between two orgs requires a deployment connection. <mark>**Change sets can only be sent between orgs that are affiliated with a production org.**</mark> For example, a production org and a sandbox, or two sandboxes created from the same org can send or receive change sets.
